Adolfo Quesada-Román is a geographer and geomorphologist with a career spanning over 15 years, encompassing collaborations with local and national governments, NGOs, private companies, and academic institutions worldwide. His primary expertise lies in teaching, research, and consultancy in disaster risk management, geosciences, geographic information systems, remote sensing, and geospatial processes that contribute to solutions for environmental, territorial, and natural resource projects. His focus areas include geomorphology, applied geography, natural hazard zoning, disaster risk analysis, land-use change studies, climate change, and geoheritage.

With over 140 indexed publications, he has made significant contributions to the dynamic landscape of Earth Sciences, Geography, and Environmental Sciences. He has served as the President of the Association of Costa Rican Geomorphologists since 2018 and has led the Physical Geography Lab at the School of Geography of the University of Costa Rica since 2017. Additionally, he collaborates and teaches at other universities, such as UNED and CATIE, and conducts consultancies both in Costa Rica and abroad.
