

## **International Conference in Solsona (Catalonia, Spain) 15-20 May 2004**

The International Conference on River/Catchment Dynamics: Natural Processes and Human Impacts is being held in Solsona, Spain, on 15-20 May 2004. As you know, the conference is being organised to mark the contributions to the discipline and impending retirement of Maria Sala, Professor of Physical Geography at the University of Barcelona and the founding Chair of COMLAND. The conference is being sponsored by a number of organisations, including COMLAND (the Commission on Land Degradation and Desertification), the International Geographical Union, the International Commission on Continental Erosion, the European Society for Soil Conservation, and the Forestry Institute of Catalonia, as well as the Universities of the Balearic Islands, and Barcelona. The theme of the conference is river and catchment processes, focusing on human impacts on catchments and river dynamics as a basis for environmental management. For further details, please refer to the conference website: <http://www.ctfc.es/conference2004/>

As well as providing updated information on publication of Conference Proceedings, the website includes a summary of deadlines and the option for on-line registration. Click on the home page picture to access the website. The second circular can also be downloaded from the web page as doc- and pdf-format files. The Website will be updated periodically and therefore we would appreciate receiving any suggestions for improving the site.

With our very best wishes,

Ramon J. Batalla, University of Lleida & Forestry Institute of Catalonia  
Celso Garcia, University of the Balearic Islands  
Moshe Inbar, University of Haifa
